

WHAT IS CLAIMED IS

1           1. A liquid crystal display comprising:

2           a plurality of electrode terminals arranged in a comb teeth  
3 manner along one of end faces of a TFT glass substrate; and

4           a plurality of lead terminals of a tape carrier package aligned  
5 to be overlapped on the electrode terminals, said plurality of lead  
6 terminals connected through an anisotropic conductive film;

7           wherein the electrode terminals near the end face of the glass  
8 substrate is formed in such a manner as to have a parallel straight  
9 region and an oblique region converging toward the end of the TFT  
10 substrate.

1           2. A liquid crystal display comprising:

2           a plurality of electrode terminals arranged in a comb teeth  
3 manner along one of end faces of a TFT glass substrate in such a manner  
4 as to be aligned on an imaginary line; and

5           a plurality of lead terminals of a tape carrier package aligned  
6 in a comb teeth manner along the electrode terminals, said plurality of  
7 lead terminals connected through an anisotropic conductive film;

8           wherein the lead terminals of the tape carrier package near  
9 the end face of the glass substrate is formed in such a manner as to have  
10 a parallel straight region and an oblique region converging toward the  
11 end of the tape carrier package.
